

HOW DO LOCAL THE PREVALENCE OF SUSTAINABLE PROJECTS IN STRATEGIC PLANNING WITHIN CHILEAN MUNICIPALITIES, AIMING FOR SUSTAINABLE LOCAL MANAGEMENT?

Marcela Lizana Vial, Universitat Jaume I, España

The study examines the prevalence of strategic planning in Chilean municipalities, focusing on its relevance for sustainable local management. Specific objectives are proposed, including investigating the current degree of these practices, identifying patterns and trends, and documenting best practices through case studies. Additionally, two hypotheses are formulated: the first suggests that a significant proportion of municipalities have implemented planning initiatives, while the second posits that those with greater implementation exhibit more efficient management practices.
